

Bruna Viza Gomes

Senior Product Designer | References available upon request | brunaviza@gmail.com | 239.216.2430

I create customer and user-centered design solutions driven by understanding real-world problems and needs. I am a big-picture thinker who believes in producing a simple but effective output through a product discovery approach. I'm ambitious in ensuring the small details are done correctly, and I can communicate my designs' intent efficiently. I'm a personable team-worker who loves to ideate through collaborative efforts. Through a delivery-focused approach, various design iterations, and being an enthusiastic team player, I successfully move products and teams forward.

ACHIEVEMENTS

2020 Webby Award:

People's Voice Winner

Websites and Mobile Sites: Science

SKILLS

Languages (fluent)

EDUCATION

American University

BS in Computer Science and Graphic Design with a specialization in User Interaction Design

ATHLETICS

American University

Varsity Women's Soccer Athlete | 4 Year

Gulf Coast High School

Varsity and JV Girl's Soccer Coach | Sep 2021–Feb 2022

EXPERIENCE

Impact Observatory

Senior Product Manager & Designer | January 2021–Present

- Led the successful build and launch of one of the first geospatial LLM platform prototypes available in the geospatial analysis field, leading to multiple company funding opportunities.
- Operated hands-on throughout the AI product development cycle by authoring system prompts for the platform's primary agent, building agentic workflows, and developing AI-evaluated QA test pairs to validate model performance.
- Defined the platform's product roadmap, designed the interface and user experience, and secured buy-in from company executives on the product vision. Conducted user and market studies to establish target user groups, define a go-to-market plan, and structure a tiered membership model.
- Recognized the need and opportunity to redesign the company's website to improve the accessibility, information architecture, and message that was conveyed through the website. Proposed copy and hierarchy updates based on a competitive market analysis, designed and implemented the current customer-facing website, and leveraged AI for content authoring after training it on the company's voice and language.
- Drove a company-wide shift from a project-based tech development cycle to an insight-driven product development structure. Introduced and established an agile development process driven by scalable releases.
- Identified misalignment between internal teams on who our core users were and which problems we were aiming to solve. Led a company-wide persona development and problem definition initiative to provide company alignment and define a clear product vision, by facilitating cross-team collaborative workshops backed by user research findings.

Trilogy Education

Assistant UX/UI Instructor | August 2021–February 2022

- Provided mentorship and guidance to students in their UX field learning by establishing an environment where students felt comfortable freely participating and receiving constructive feedback.
- Equipped students with career-centered feedback during lectures, in-class activities, and weekly work to aid student development for a prosperous career future within the UX field.

National Geographic Society

UX Designer | June 2018–January 2021

- Led the redesign of the resource library search, home pages, and individual asset pages by integrating user research insights, resulting in enhanced user experience and engagement. Recognized with a Webby Award.
- Conducted comprehensive user research and developed innovative design solutions for conservation-driven platforms.
- Designed global features (site-wide navigation and profile platform), facilitating seamless communication across all National Geographic Society platforms and improving user interaction and information accessibility.
